

Data Embassy

necessity
or
additional feature?

Mehis Sihvart
Director RIK

Centre of Registers and Information Systems (RIK) and objectives

- ICT focused state agency under the Ministry of Justice
- One of the biggest state owned IT agencies in Estonia
- Registers and informations systems: e-Business Register, e-File, Prison Information System, e-Notary, Courts Information System, Realestate Register...
- Innovative environment and integrated e-services => efficient e-government

Paradigm shift

- Where is the final and legal truth?
- What if information is not accessible if needed?
- What happens if system does not function as expected?
- What happens if somebody gets unauthorized access to your system?

What should we do?

- We have to protect data integrity
- We have to protect data confidentiality
- We have to keep data accessible

Is that enough?

What is Data Embassy?

- It's legal and technical solution what enables government to „turn back time“
- It's a bit like quantum – same time you should and shouldn't have control over that solution

Data Embassy

is necessity
and
additional feature!
